

Introduction to IPSO Smart Objects

Jaime Jiménez, Ericsson Research, IPSO Smart Objects co-chair.

June 15th, 2015

Problems to solve in IoT

› Interoperability

- Software's interaction with physical resources.
- Device independence from software management and vendors.
- Discovery, Management, Reporting, Security, Authorization.

› Scalability

- Billions of devices, users, connections...
- Billions of interactions.

› Reusability and modularity

- Software, networks, protocols, data models.
- In a vertical segment, across vendors.
- Across diverse vertical segments.

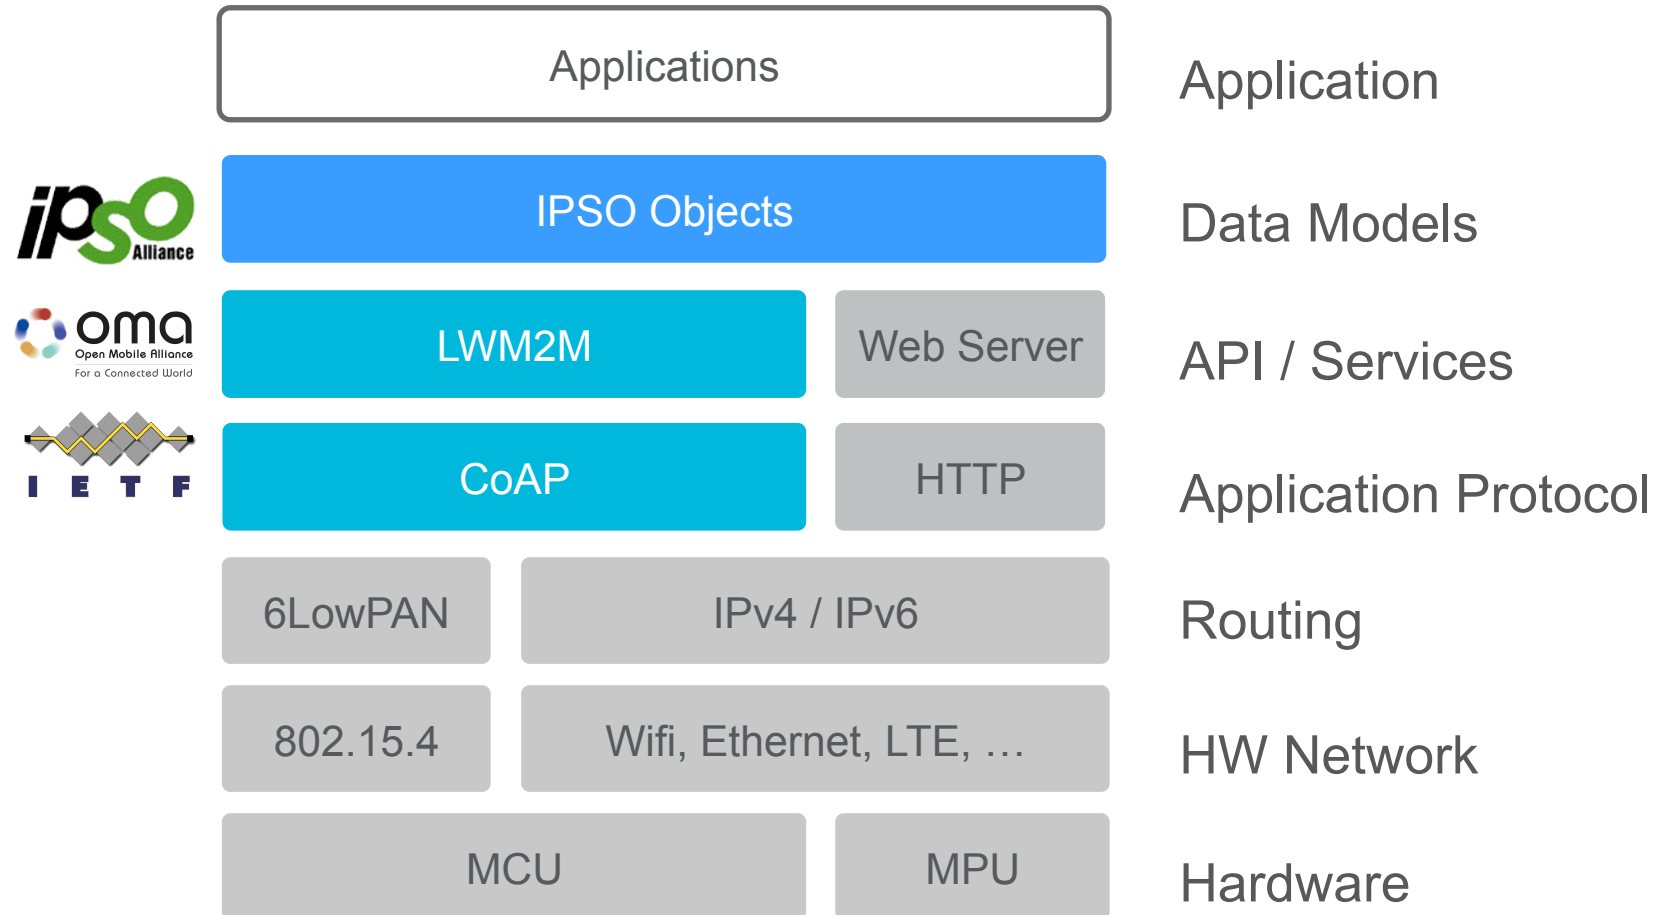

› Permissionless Innovation

- Enable anyone to participate and innovate.

IPSO Smart Objects

- › Developed by IP for Smart Objects (IPSO) Alliance. In the Smart Objects Working Group.
- › Semantic Interoperability across IoT devices and applications.
- › Based on LWM2M Object Model.
- › Reusable Object IDs and Resource IDs.
- › Transport Protocol Independent (CoAP, LWM2M, MQTT, HTTP) if support addressing, content formats and data types.
- › Basic Objects represent simple sensors and actuators.
- › Basic Starter Pack published on 2014 (Expansion Pack upcoming).
- › Tested during IPSO Interoperability test on May 2015.

The Web in constrained devices

IPSO Smart Object Structure

› Reusable resource and object IDs

- Common definitions for concepts
- Map to semantic terms e.g. temperature, currentValue
- IDs are registered with the OMNA

› Usable in different transport protocols that support

- URI Addressing (/home/weather/3303/0/5700)
- Data Types
- Content Formats
- RWX Operations

Example: IPSO Humidity Sensor

Object	Object ID	Object URN	Multiple Instances?	Description
IPSO Humidity	3304	urn:oma:lwm2m:ext:3304	Yes	Relative humidity sensor, example units = %

Resource Name	Resource ID	Access Type	Multiple Instances?	Mandatory	Type	Range or Enumeration	Units	Descriptions
Sensor Value	5700	R	No	Mandatory	Float			Last or Current Measured Value from the Sensor
Units	5701	R	No	Optional	String			Measurement Units Definition e.g. "Cel" for Temperature in Celsius.
Min Measured Value	5601	R	No	Optional	Float	Same as Measured Value	Same as Measured Value	The minimum value measured by the sensor since power ON or reset
Max Measured Value	5602	R	No	Optional	Float	Same as Measured Value	Same as Measured Value	The maximum value measured by the sensor since power ON or reset
Min Range Value	5603	R	No	Optional	Float	Same as Measured Value	Same as Measured Value	The minimum value that can be measured by the sensor
Max Range Value	5604	R	No	Optional	Float	Same as Measured Value	Same as Measured Value	The maximum value that can be measured by the sensor
Reset Min and Max Measured Values	5605	E	No	Optional	Opaque			Reset the Min and Max Measured Values to Current Value

Roadmap

- › UPNP study – from SOAP towards REST.
- › IETF 93 – Bits and Bites.
- ✓ Draft Smart Object Data Model Design Guide @done (15-03-30)
- ✓ Draft Smart Object Expansion Pack for Basic Objects @done (15-04-30)
- ✓ Set up test servers for IPSO objects (LWM2M + TLV payload) @done (15-06-15)
- ☐ Draft Domain Specific Objects reference designs @due (mid 2015)
- ☐ Publish Smart Object Data Model Design Guided @due(15-07-31)
- ☐ Publish Smart Object Expansion Pack for Basic objects @due(15-07-31)
- ☐ Publish Smart Object Expansion Pack for Composite Objects @due(15-07-31)
- ☐ Publish Smart Object Expansion Pack for Reference Devices @due(15-07-31)
